

5     SUBSTITUTED   ANILINIC   PIPERIDINES   AS   MCH   SELECTIVE  
ANTAGONISTS

Abstract of the Disclosure

10     This invention is directed to compounds which are  
selective antagonists for melanin concentrating hormone-  
1     (MCH1) receptors.     The invention provides a  
pharmaceutical composition comprising a therapeutically  
effective amount of the compound of the invention and a  
15     pharmaceutically acceptable carrier.     This invention  
provides a pharmaceutical composition made by combining  
a therapeutically effective amount of the compound of  
this invention and a pharmaceutically acceptable  
carrier.     This invention further provides a process for  
20     making a pharmaceutical composition comprising combining  
a therapeutically effective amount of the compound of  
the invention and a pharmaceutically acceptable carrier.
